

# WHAT'S NEW IN 2017

In 2017, TACTICAM will thrill the market of the action camera again, by releasing a series of optical telescopes, directly attachable to the ICU.

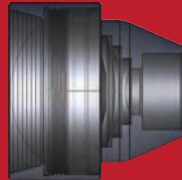

Not only is ICU the only camera on the market adaptable with an optical scope, but more important the shooters can now enjoy different views and angles to their footage.

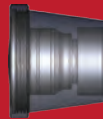

**SNIPER x10**  
x10 telescope for those into long-range shooting

**AMBUSH x3**  
x3 optical telescope to get closer to the action

**SHARK 180**  
180° wide angle lens that captures the whole scene

# TACTICAM I.C.U.<sup>®</sup>

## INTEGRATED CAMCORDER UNIT

I.C.U. is the first tactical camera that is specially designed for the shooters. Thanks to I.C.U., filming, viewing, editing and sharing your shooting sessions is now child's play. When the general market only offers POV (point of view) cameras, TACTICAM brings a new filming concept - the G-POV (gun's point of view), allowing to focus on what the barrel is actually pointed at. I.C.U. is the perfect camera to improve shooting abilities and create first-person-shooter footage.

- ★ Created to meet the specific needs of shooters, I.C.U. can be mounted in the blink of an eye on the Picatinny rail of most rifles and pistols.
- ★ It's lightweight (27 g) so doesn't alter your weapon's balance. Its compact shape makes it an elegant accessory and ensures optimal compatibility with both tactical holsters.
- ★ Its super simplified handling (its exclusive remote control means that you can operate the features using your thumb) lets you record videos or take pictures without having to release your target.
- ★ The camera body has been tested to ensure that it protects the lens from BB bullet hits, even when struck on the front. Its simple design (no sharp or stabbing parts) guarantees total safety during use, even if you fall over.
- ★ With approximately one hour of battery life in video mode, I.C.U. lets you film all afternoon without recharging. Practical recharging via a USB port.

- ★ Two green and red LEDs tell you your camera status in real time. Fitted underneath the camera, they are invisible to your opponents.
- ★ I.C.U. accepts Micro-SD cards with a 32 GB maximum. I.C.U. can also be used as a Micro-SD card reader.
- ★ With I.C.U. you can choose your video formats: light Ultra VGA (ICU1.0) or more accurate HD 720p (ICU2.0)
